Migrating to the New DMS

A successful transition of legal records and digital assets — completed faster, smarter, and with full accountability.

PROJECT COMPLETION REPORT

Made with GAMMA

Project at a Glance

The migration successfully transferred the organization's legal records and digital assets into the new Document Management System. A custom automation tool was developed to accelerate the process, and the new system now supports all required business data with enhanced tracking.

Objective

Seamless transfer of case records and attachments to the new DMS

Approach

Custom automation tool built to handle bulk data with minimal manual effort

Outcome

System is live with enhanced performance, updated data structures, and full audit trails

Made with GAMMA

Key Achievements

10× Faster Performance

Multi-stream processing handled data in bulk rather than sequentially, condensing weeks of work into days.

Continuous Sync Engine

An auto-reconnect feature prevented session interruptions during long transfers, ensuring zero data loss.

Data Enrichment

New tracking fields — Receiving Date, Shredding Date, and Verification Status — were added to the database.

Comprehensive Audit Logs

Detailed logs were generated for every file moved, ensuring full accountability and traceability.

Made with GAMMA

EFFICIENCY & SPEED

10× Faster Than Standard Methods

By implementing **multi-stream processing**, the migration handled records in parallel rather than one at a time. Smart memory management kept the system stable even under heavy load.

Multi-Stream Processing

Bulk data handling replaced sequential file-by-file transfers

Smart Resource Management

Memory handling optimized to prevent crashes during peak loads

Made with GAMMA

Data Quality Report

While the vast majority of data migrated successfully, two categories of records have been flagged for manual review. A targeted cleanup is already underway.

File Mismatches

Records where the original PDF was not found in the source folder. Recovery is being attempted via an alternative backup route.

Incomplete Records

Records with missing or incomplete details in the legacy database. These require manual enrichment before they can be fully validated.

Made with GAMMA

Migrating User Groups (E-Person Groups)

Structuring the Organization

- **Organized Access:** Migrated all user groups with standardized naming conventions to match the new DMS hierarchy.
- **Role Mapping:** Ensured that permissions from the old system were accurately translated so users have the correct access levels on day one.
- **Result:** A clean, navigable administrative structure.

Made with GAMMA

Integrated Item & File Migration

Ensuring Document Integrity

- **Deep Migration:** Each "Item" was migrated with its complete set of descriptive information (metadata) and all associated attachments.
- **All-or-Nothing Policy:** To maintain high data standards, we implemented a "Complete Set" rule. If an item required three files but one was missing, the system flagged and skipped the item rather than creating a broken record.
- **Detailed Recovery Logs:** Every skipped item was logged with the specific reason, allowing for a targeted manual fix.

Made with GAMMA

User Account Migration (E-Persons)

Seamless Transition for Staff

- **Profile Migration:** Successfully transferred user profiles, including full names and contact data.
- **Security Challenge:** Legacy passwords were already encrypted (hashed). A standard migration would have "double-encrypted" them, making them unusable.
- **The Solution:** We engineered a bypass that allows the encrypted passwords to be migrated in their original secure state, ensuring users can log in with their existing credentials without a password reset.

Exception Summary by the Numbers

2,124

File Mismatches

Records where the source PDF was not present. Backup recovery is in progress.

2,400

Incomplete Records

Records with missing fields in the legacy database requiring manual enrichment.

10×

Speed Improvement

Migration completed in a fraction of the time compared to standard methods.

These exceptions represent a small fraction of the total records migrated. The vast majority of data was transferred successfully and is now live in the new DMS.

Recommendations for Future Growth

1 **Faster Storage Infrastructure**

Migrate from network-based storage to direct system storage to eliminate latency and further increase throughput.

2 **Unified Asset Store**

Consolidate all digital files into a single, centralized repository to simplify searches and improve retrieval reliability.

3 **Standardized Naming Conventions**

Define clear data naming rules before future migrations to ensure 100% accuracy and reduce exception handling.

Project Complete — Next Steps

The new DMS is live and operational. The following actions will close out the remaining work and set the foundation for future migrations.

→ Exception Cleanup

Complete manual review and enrichment of the 4,524 flagged records

→ Backup Recovery

Attempt PDF recovery for 2,124 file mismatches via alternative backup routes

→ Infrastructure Upgrade

Plan migration to direct system storage for improved future performance

→ Standards Documentation

Formalize naming conventions and data standards for all future migrations
